# Gender Pay Gap Report 2023

### Gender Pay Gap Report 2023

Bevan Brittan is committed to promoting equality of opportunity and diversity both at our firm and in our relationships with clients and others. We actively promote an inclusive culture and strive to create an environment where our employees and Partners can be themselves.

This report sets out the details of our Gender Pay Gap analysis as at 5 April 2023. This is a legal requirement and is just one aspect of our commitment to monitor and analyse our data on gender pay and progression so that we can be confident that we are doing all that we can to ensure equality of opportunity and an inclusive work environment for all of our people.

We remain committed to supporting flexible working arrangements: almost 1 in 5 (19.06%) of our employees have a flexible working arrangement in place.

#### 1. Employee mean and median gender pay gap

The gender pay gap is the difference in average (mean or median) hourly earnings between men and women across a workforce.

It is important to note that this is not the same as equal pay, which focuses on women and men being paid the same for doing equal work.

The mean gender pay gap shows the difference between the average of men and women's hourly pay. Mean averages are useful because they place the same value on every number they use, giving a good overall indication of the gender pay gap. However, very high or low hourly pay can 'dominate' and distort the figure.

The median gender pay gap is the difference between the midpoints in the ranges of men's and women's hourly pay. Medians are useful to indicate what the 'typical' situation is. They are not distorted by very high or low hourly pay.

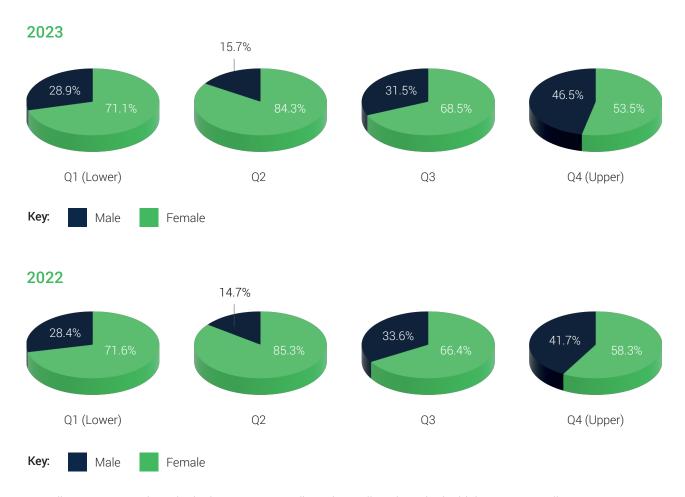

On 5 April 2023, Bevan Brittan had 509 employees (on 5 April 2022 this figure was 463), of whom 69.35% were female (on 5 April 2022 this was 70.41%). The gender pay gaps for this year and last year are shown below.

Mean Gender Pay Gap			М	edian Gender Pay G	ар
2023	2022	Change	2023	2022	Change
21.48%	17.61%	+3.87%	30.40%	23.34%	+7.06%

The employee workforce has increased by 46 employees, which is a notable 9.94% increase.

Both the mean and median gender pay gaps have increased from last year: the mean by 3.87% and the median by 7.06%.

## 2. Distribution of men and women across the organisation divided into four quartiles from lowest to highest pay

Quartile 1 represents those in the lowest pay quartile and quartile 4 those in the highest pay quartile.

The representation of men has increased in the two lower paying quartiles, increasing by 0.5% to 28.9% in the lower quartile and by 1.1% in the lower middle quartile (Q2). The representation of women has improved in the third quartile by 2.1% to 68.5% from 66.4%. These improvements are contrasted by a decrease of 4.8% in the representation of women in the upper quartile, where salaries are the highest.

The gender pay gap at Bevan Brittan continues to largely be driven by the structure of our workforce. Job level is by far the highest contributing factor to our gap and even though our male/female % split in the lower, second and third quartiles have improved, significantly fewer men than women occupy roles in the two lower paying quartiles.

Location is the second highest contributing factor. 41% of our London employees are male, versus 30.2% in Leeds, 27.6% in Bristol and 27.3% in Birmingham. The market dictates that we generally pay more in London.

Women also dominate non-lawyer roles, comprising 75% of the non-lawyer population. Since non-lawyer roles are paid less on average than lawyer roles and there are more women in these roles, this contributes to the higher mean and median pay gap of the whole employee workforce.

#### 3. Employee mean and median bonus gap

Mean Bonus Gap			Median Bonus Gap		
2023	2022	Change	2023	2022	Change
40.96%	42.51%	-1.55%	34.20%	28.05%	+6.15%

The mean bonus gap has decreased from last year by 1.55% and stands at 40.96%. The median bonus gap has increased by 6.15% to 34.20%.

The highest percentage and number of men received a bonus in the upper quartile and conversely the highest percentage and number of women received a bonus in the lower quartile. The upper quartile is the highest contributor towards the bonus gaps.

The bonus gap legally has to be calculated using actual bonus amounts, with no adjustments made for part-time working and as is the case in other organisations, Bevan Brittan pays bonuses on a pro rata basis. 19.06% of our employees (nearly 1 in 5) work part-time, of which 85.57% are women. This contributes significantly to our bonus gaps.

#### 4. Proportion of men and women receiving a bonus

Proportion of Women Receiving a Bonus		Proportion of Men Receiving a Bonus			
2023	2022	Change	2023	2022	Change
32.03%	27.13%	+4.9%	33.97%	35.77%	-1.8%

The proportion of women receiving a bonus has increased by 4.9% and the proportion of men receiving a bonus has decreased by 1.8%.

If we compare the proportion of women receiving a bonus in 2023 to 2020, it has improved by 10.19% from 21.84% in 2020 to 32.03% in 2023.

#### 5. Partner Earnings Gap

Members of a partnership are excluded from compulsory gender pay gap reporting, however we choose to publish our partner earnings gap in line with best practice. There are challenges in including partners in calculations and where calculations include partner remuneration, we have referred to this as an earnings gap, rather than a pay gap.

In April 2023, there were 48 equity partners at Bevan Brittan, of whom 33.33% were female. This is a percentage increase of 0.68% from last year (32.65%).

Mean Partner Earnings Gap			Median Partner Earnings Gap		
2023	2022	Change	2023	2022	Change
5.30%	2.08%	+3.22%	-5.17%	-9.08%	+3.91%

Both the mean and median partner earnings gaps are lower than the employee gender pay gaps at 5.3% and -5.17% respectively.

#### 6. Combined Gap

Mean Combined Gap			Median Combined Gap		
2023	2022	Change	2023	2022	Change
43.89%	47.81%	-3.92%	34.13%	35.10%	-0.97%

The combined mean and median gaps are higher than the employee mean and median gender pay gaps, due to the relatively higher proportion of males in the partner population than males in the firm as a whole. Partner earnings are determined by the profits of the firm and overall they receive higher levels of remuneration than employees.

#### 7. Closing our gender pay gap

We continue to focus on taking steps to make improvements including:

- · Focus and attention on how we can hire, retain and promote women in to senior positions.
- Ensuring we have a good gender balance in shortlists for recruitment and promotions.
- Having diverse selection panels wherever feasible.
- Using skill-based assessment tasks in recruitment, reflective of what individuals would be expected to perform in the role they are applying for, rather than rely on interviews.
- · Advertising as many jobs as possible as having the option to work flexibly.
- · Actively promoting and supporting our hybrid working approach for as many roles as possible.
- · Analysing promotions to ensure a fair representation of women and men.
- · Improving our Equality, Diversity and Inclusion training and awareness across the firm.
- Ensuring that our lower quartile roles carry on attracting men as well as women.
- Considering how our bonuses are distributed across the different pay quartiles.
- · Focusing on women's health and wellbeing and raising awareness for managers.
- Regularly reviewing our promotion processes.
- · Providing coaching to anyone who returns from maternity leave to help them with their continued career aspirations.
- Providing financial grace periods for any family leave.
- Monitoring and analysing exit interview data; the proportion of men/women leaving and their reasons for leaving.
